

Product	GD500 Intelligent Multi Coin Validator
Specification	Input Voltage: DC+12V±20% Work Temperature: -15°C~+75°C Output: Pulse
Coin acceptance	5 coin acceptance Coin diameter: φ17mm~33mm Coin thickness:
Box Package	50 pcs/box Size:435*350*270mm/box CMB: 0.072116m³/box G.W.:20kg/box
Single Package	Weight:0.4kg/pc Size:14*6.5*13cm/pc

Product View

Operation	<p>1st: clean all data: SET+NOM+F-button 3second</p> <p>2nd:program coins</p> <p>SET +NOM =program coins. F-button to select output pulse signal. LED will show 00.01.02.03 to 99. drop coin to program.</p> <p>START+NOM = operation.</p> <p>Other. N.C. → N.O. → Select N.O. or N.C. to fit different machine.</p>
------------------	--

Cable Interface
A: Gray line-Counter
B: Balck line-GND
C: Write line-Coin signal
D: Red line-DC12V

History	1996 into market, 15 years long history model, Elite model
Application	Vending machine, gaming machine, jukebox, coinbox, cyber café, arcade crane, etc.
Standard	European standard
OEM	Accepted
Brand	GONDU

GD 500E multi-coin intelligence coin selector

Operation:

A. Power up.

B. Clear up all coin data:

1. Turn switch to the position of "SET" . and then turn the sensitive DIP to the position of "MAX"., Keep press the Coin-value setting button more than 3 seconds until you will be hear a "BI" (means data cleaned).

2. Turn the sensitive DIP back to the position "NOM", Keep press the Coin-value setting button more than 3 seconds until you will be hear a "BI" (means data cleaned).

3. Turn the sensitive DIP to the position "MGN", Keep press the Coin-value setting button more than 3 seconds until you will be hear a "BI" (means data cleaned).

C. Program coin-valude:(Single coin output multi-signal)

Turn switch to the position of "SET", and then turn the sensitive DIP to the position of "NOM". LED will show "00"

Press Coin-value setting button ,LED will show you "01.02 or to "99" ,

If LED display show 01, you deposit 1st coin value into, ,when you hear a "BI" means coin selector have programmed it. Go on throw the coin 7 times ,till it show 'F', or hear a "bi".

If you want to study 2nd coin value, Adjust Coin-value setting button to 02.or 03, you throw coin into, ,when you hear a "BI" means coin acceptor have programmed 2nd coin value. Go on deposit 7 coins(same 2nd coin value) ,till it show 'F', or hear a "bi".

D. Working.

8. Turn the setting DIP switch to the position of "START". and then turn the sensitive DIP to the position of "NOM". The coin selector begin to work normally.

Note: Program coin-valude:(Multi-coin output a signal function)

(Function $5+5=10$, or $5+5+5=15$), turn the sensitive DIP to the position "MGN", adjust the setting DIP switch to the position of "SET", LED display will show "p2,"means you put two coins, it produce 1 coin signal. "p5" means you put five coins, it produce 1 coin signal. You throw coin into. You can come true your function.

How to program coin data.

it should be **SET + NOM** , LED will show 01-99. (coin channel ,and how many width-pulse signal output), insert coin to program coin data.

More function .

MAX+SET. (display like d1, d2 or 0.1 to 0.9).

what is D1 : (output pulse-width interface)

what is D2 (RS232 or USB interface)

what is 0.1-0.9(this is $1+2=3$ function)

personal description for your understanding.

Date cleaning= SET+NOM and press LED button 3 second.

Coin program= SET+NOM , press LED button to choose give how many output pulse signal, 1.2..3 to 99. drop your coin to program coin(5 kinds)

OPERATION= START

COIN = give output pulse signal

NO, NC to match your machine.

FAST,MID,SLOW . signal speed.

MGN NOM ,MAX = coin recognition degree.

LED show.

SET+NOM Show 00-99 how many output pulse signal

SET+MGN Show 0.1-0.9 more coin give 1 signal

SET+MAX show d1 d2 d1=will output pulse . d2=RS232
